PROFESSIONAL SUMMARY

Software Engineer with 4 years of experience building backend services, ETL pipelines, and event-driven applications and Agentic Workflows. Experience in designing APIs, data processing systems, and workflow orchestration using Python, FastAPI, and Temporal, with a focus on building reliable production systems.

WORK EXPERIENCE

Software Engineer

Mar 2026 - July 2026

Faster Outcomes Inc

Remote, US

- Lead the Fullstack Product development of the Healthcare Platform for Wellness Clinics which analyses patient records, generates assessments and treatment plans for patients.
- Designed and implemented a Temporal-based synchronization service integrating legal CMS (SmartAdvocate, Clio) and EHR (Cerbo, Zenoti) with FasterOutcomes Platform.

Senior Software Engineer

Oct 2020 – Jul 2024

Wipro Linecraft AI

Pune, India

- * **Led a team of 4 engineers** to deliver Backend systems, owning architecture and release timelines.
- * Built a **scalable real-time, event-driven loss detection system** ingesting multi-logger streams arriving **every 500ms**, improving monitoring efficiency and **reducing supervisory time by 50%**.
- * Re-architected a **core ETL pipeline** in Python with Luigi ETL framework **reducing pipeline duration by 6x**.
- * Developed and launched an **automated email reporting service** using Python and Node.js **driving a 10% increase in weekly engagement** with the core analytics platform.
- * Owned the end-to-end development of 50+ RESTful APIs in Flask, which enabled the entire suite of Manufacturing Line Analytics features and directly supported the company's main product offering.
- * Implemented a new monitoring stack using Prometheus & Grafana, reducing Mean Time to Discovery (MTTD) of **outages from hours to 5s**. This proactively helped in **resolving 40% issues** before impacting the customer.
- * **Decoupled and dockerised 5 microservices**, laying the groundwork for a scalable Kubernetes deployment on **AWS cloud**, transitioning from Internet Information Services (IIS) and PM2.
- * **Onboarded a cloud migration consultancy** with our detailed backend architecture, services, and **current AWS EC2 based deployment** to facilitate a successful **full AWS transition**.

Global Remote Mentorship Intern

May 2020 – Sep 2020

IBM

Remote, India

- * **Finetuned BERT on a technical corpus** using 3 techniques: MLM, NSP, and Sequential Question Generation.
- * Developed a **language model in PyTorch** by combining a **multilayered BERT-based span selection model** with an **Attention over Attention architecture-based model**, and trained the model on a GPU cluster.
- * Achieved a **state-of-the-art F1 score of 57.7** on the TechQA dev set, surpassing previous benchmarks.

PROJECTS

- * **Dataset Curator:** Built a Dataset Curator where you can chat and do any kind of transformations on your dataset. Used LangGraph, FastAPI, PgVector, OpenRouter. github.com/rudraksh97/DatasetCurator
- * **Job Application Drafter:** Polls RSS feeds for job links and executes a Agentic workflow per job link. Built with LangChain, FastAPI, Browser Use (YC W25), OpenRouter. github.com/rudraksh97/AutoApply

SKILLS

Backend & Distributed Systems: Python, Node.js, TypeScript, FastAPI, Temporal, Celery, Luigi, MQTT, RabbitMQ

AI / LLM Infrastructure: LangChain, LangGraph, Browser Use, LangFuse, LangSmith

Cloud & DevOps: AWS, GCP, Firebase, Docker, Prometheus, AlertManager, Grafana, JMeter

Databases & Messaging: PostgreSQL, MSSQL, Firestore, PgVector, Redis

EDUCATION

State University Of New York at Buffalo

New York, USA

Master of Science, Computer Science (Systems Track)

Aug 2024 – Dec 2025

Indian Institute Of Technology Delhi

New Delhi, India

Bachelor of Technology, Engineering Physics

Jul 2016 – Jul 2020
